

To: The Federal Communications Commission  
In the matter of: RM-10740

I believe the Petition for a Rulemaking is not the proper avenue to seek relief from a supposed problem between the two groups involved and consequently should be rejected. Enactment of RM-10740 will not improve the level of tolerance, cooperation and goodwill which must prevail for all involved to alleviate the problem.

The existing rules provide sufficient protection and adding more will only lead to further complications in the long run. The additional enforcement complications and manpower are unwarranted. The individuals proposing this change may have an axe to grind but this is not the proper approach or solution. If there is malicious interference on the part of either party there are existing rules to cover the situation.

I have been licensed and active since 1947 and believe this is one rule that is not needed. Respect and courtesy are required, not additional rules.

I sincerely request that the FCC reject this proposal.

Don Morton, W7LBN
